

ARROWHEAD VINE CARE

LIGHT

Arrowhead vines (Syngonium), often sold as Nephthytis, prefer bright, indirect light. Protect from strong direct sun, especially pink, pale and variegated leaves. Lower light may reduce color and produce longer stems. Rotate the pot occasionally for even growth.

WATERING

Water when the top inch of potting mix becomes dry, keeping the root zone lightly moist. Water thoroughly, drain completely and empty the saucer. Avoid letting the entire root ball dry hard or remain waterlogged. Check less often during slow winter growth.

SOIL

Use an airy, well-drained houseplant mix, with perlite or fine bark for extra air space. Choose a pot with drainage holes. Repot in spring when roots crowd the container, moving up only one size. A support can guide climbing stems as the plant matures.

TEMPERATURE & HUMIDITY

Warm conditions around 65-80°F are suitable. Protect from cold drafts, chilling and frost. Moderate humidity supports healthy foliage, although many varieties adapt to household conditions. A humidifier can help in a very dry room. Keep away from hot, drying vents.

FERTILIZING

Feed during active spring and summer growth with a balanced houseplant fertilizer at the labeled dilution. Reduce or stop feeding when growth slows. Pinch or prune stems with clean scissors to maintain a bushier shape, or allow them to climb or trail.

PESTS & HANDLING

Watch for mites, aphids and mealybugs, isolating affected plants promptly. Yellowing with wet soil may signal root trouble; check drainage first. Keep plants away from children and pets. Sap and chewed leaves can irritate skin, eyes and mouth; wear gloves when pruning.
