

For the joy of gardening!

Estabrook's

VINING MANDEVILLA

LIGHT

Place in bright light with sun for strong flowering. Introduce indoor-grown plants to outdoor light gradually. Provide shelter from cold wind, and some afternoon protection if leaves scorch on a very hot patio.

WATER

Keep the growing mix evenly moist during warm, active growth. Check the root zone rather than watering by the calendar. Soak thoroughly, drain freely, and avoid both prolonged drought and standing water.

SOIL & PLANTING

Use fresh potting mix in a well-drained container. Install a trellis or other secure support at planting. Guide flexible new shoots onto it and tie loosely; do not force older woody stems into sharp bends.

FEEDING

Feed during active growth with a labeled container-plant fertilizer. A flowering formula may be used as buds develop. Do not exceed label rates or combine several feeds. Pause fertilizer during winter when growth is slow.

SEASONAL CARE

Move indoors before frost and sustained cold nights. Keep in a bright, frost-free room; reduce watering as growth slows. Trim long shoots as necessary for space, then reshape in spring before gradually returning outdoors.

HELPFUL TIPS

This guide is for identified climbing mandevillas, including Small Leaf Vining types. Compact Madinia plants have their own guide. Check leaf undersides for pests before indoor moves. Avoid skin and eye contact with the milky sap.
