Thank you for your purchase of a Japanese Maple!

- New plants require weekly watering until November
- Make sure your new maple is planted immediately after purchase
- 1.5 - 2” of mulch will help keep the ground moist around your tree
- Always plant in well-drained soil and use a soil amendment like Planting Mix to ensure good adequate soil drainage
- Dig the planting hole larger than the root mass/container and mix the Planting Mix with the excavated soil; Place the tree in the hole and backfill with the amended soil mixture
- Red leaf varieties need at least 6 hours of sun to maintain their leaf color
- Supplemental water is necessary during the dry summer months to prevent leaf scorch, especially for cut or thread leaf varieties
- Fertilize spring and fall with Tree Tone for best performance
- Thin weeping varieties and remove dead branches for best appearance
- Please call the Garden Center if you have any questions about your plant
